

SIP Trunking Enterprise Voice

Improved Voice Quality &
Customer Experiences

SIP Trunk Overview

Enhance customer experiences and improve business functions with RingSquared™ SIP Trunking, a higher-quality phone connection that works with your current phone system to get you better voice quality and failsafe backups.

Key Capabilities

1 High-Quality Voice

Higher-quality voice support for improved customer experiences.

2 Reliable Coverage

SIP Trunk failover helps you avoid dropped calls.

3 Flexible System Connections

Compatible with existing on-premises & hybrid phone systems.

4 Centralized Voice Connection

Unify your business phone system, even across multiple locations.

5 Built-In Functionality

Handle inbound & outbound calls, transfer calls, set up call routing & more.

6 Multiple Phone Options

Works with SIP phones, softphones, traditional office phones & in-house systems.

7 Automatic Backup for Business Continuity

Automatic routing redirects calls if you lose power or Internet connection.

8 Scalable Business Solutions

Easily connects to other cloud-based PBX, UCaaS & CCaaS solutions.

9 Lower Upfront Costs

Avoid the expense & delays of traditional phone line installation.

10 24/7 RingSquared Support

Expert technical support available when you need it, with offices across the country.

Who Is SIP Trunking For?

- ✓ Businesses upgrading from a single phone line & Internet connection.
- ✓ Users requiring greater system flexibility & stability.
- ✓ Growing businesses looking for additional phone system features.
- ✓ Businesses connecting multiple locations.

Fast, Scalable, Easy to Implement

Works with any business communication system for streamlined integration.

Reliable Business Continuity

Connect to RingSquared switching facilities, located across six states for geo-redundancy.

Secure SIP Trunking Network

Get industry-leading security for your essential business operations.

Get Started

The RingSquared team will help you design a best fit solution – here are some of the options you'll be customizing:

- ✓ Will you use an existing system or a UCaaS or CCaaS solution?
- ✓ If using an existing phone system, will you need SIP to TDM conversion hardware?
- ✓ Determine the devices you'll use – office phones, SIP phones, softphones, laptops, others?
